Tribal Identifier Implementation Fact Sheet

Data Standard: **Tribal Identifier**

Description: The names and codes necessary to constitute consistent and unambiguous identification of federally-recognized tribal entities of interest to the Environmental Protection Agency (EPA) and its partners.

Requirements:

1. Managers of information systems to which the standard applies must ensure that these systems provide the tribal names or codes as specified in the standard when tribal information is exchanged.

2. System managers are encouraged to modify applications, regulations, collection requests, and Federal Register Notices where necessary to implement the standard.

Implementation

Date:

Applicable Systems: December 31, 2005, or as part of normal reengineering schedule.

The standard applies to Agency information systems or collection requests that exchange tribal identification information with Agency or partner systems.
